PRACTICAL HEALTHCARE TECHNOLOGY GUIDE / INDIA

Healthcare software implementation checklist

For Implementation leads and hospital IT

Executive summary

Treat go-live as a controlled operational change with a documented acceptance and rollback plan.

Before configuration

Identify sponsors, users, scope, data owners and contractual responsibilities. Inventory interfaces, network and devices.

Before migration

Use de-identified test data. Confirm data mapping, record counts, duplicate handling, retention and backup recovery. Reconcile a representative sample with owners.

Before go-live

Complete role tests, training, outage drills and escalation. Define acceptance criteria, downtime process, rollback decision maker and post-launch support.

Scope: educational analysis, not original survey data or a promise of software performance.

Implementation worksheet

Use this checklist with your own facility. Document evidence and assign an owner for each item; leave patient information out of the worksheet.

Stage	What to verify	Owner / status
Readiness	Scope signed, owners assigned and risk register reviewed.	_____
Validation	Migration reconciliation and access tests passed.	_____
Cutover	Backup, communications and downtime plan agreed.	_____
Stabilization	Daily issue review, ownership and exit criteria.	_____
